Just had a call from Jeff Smith, BOR LCR.
They are going to do surface water sampling of CO river at Lake Mead.

He wants to know what protocol EPA is using so they can be compatible.

Any thoughts on where we can find this for him?

Thanks.

As you're well aware, there are numerous Federal/State/local government and Tribal entities doing water quality and/or sediment sampling – some at the

request of EPA and others on their own.

Is there any way that Area Command can coordinate and corral all these data at a single location, or at least post links to where the info is?
